

INSURANCE BUSINESS OS + WEBSITE

One Customer → One Digital File → Complete Insurance Lifecycle

Developer handover document • Current model: Solo Owner/Admin • Future-ready architecture

1. PRODUCT VISION

Build a specialized Insurance Business Operating System (not a generic CRM) plus a premium customer-facing website. The system must manage the complete journey: Lead → Requirement → Quote/Comparison → Proposal → Policy Issuance → Servicing → Renewal → Claim → Grievance → Ombudsman → Closure, with every document, activity and communication linked to the customer.

- Current priority: extremely simple and fast for one owner to operate every day.
- Future-ready: employees, teams, branches, customer portal, mobile app, integrations and AI can be added without rebuilding the core.
- Mobile-first, professional, secure and scalable.

2. INSURANCE PRODUCT MASTER – ALL MAJOR CATEGORIES

Create an Admin-configurable Insurance Category/Product Master. Categories must be editable and new products can be added without code changes.

Category	Examples / sub-types
Health Insurance	Individual, Family Floater, Senior Citizen, Group/Corporate, Top-up, Super Top-up, Critical Illness, Personal Accident, Hospital Cash, Disease-specific/Fixed Benefit, International/Overseas Health, Maternity-focused products
Life Insurance	Term, Whole Life, Endowment, Money-back, Savings/Guaranteed-return, ULIP, Child, Retirement/Pension/Annuity, Group Life
Motor Insurance	Private Car, Two-Wheeler, Commercial Vehicle, Taxi/Passenger Carrying, Goods Carrying, Fleet
Travel Insurance	Domestic Travel, International Travel, Student Travel, Senior Citizen Travel, Schengen/visa-related travel
Home / Property	Home Insurance, Contents, Building, Property All Risk, Landlord/Tenant-related covers
Personal Accident	Individual PA, Family PA, Group PA, Accidental Death/Disability

Commercial / Business	Business Package, Shop/Office, SME, Commercial Property, Business Interruption
Fire / Property	Fire & Special Perils, Industrial All Risk, Consequential Loss/Business Interruption
Marine	Marine Cargo, Marine Hull, Transit-related covers
Engineering	Contractor's All Risk, Erection All Risk, Machinery Breakdown, Electronic Equipment
Liability	Public Liability, Product Liability, Professional Indemnity, Directors & Officers, Cyber Liability
Employee / Statutory-related	Workmen/Employee Compensation, Group Personal Accident, Group Health and other employee covers
Agriculture	Crop, Weather-related, Livestock and other agricultural covers
Specialty / Miscellaneous	Cyber, Event, Pet, Gadget/Equipment and other insurer-specific/specialty products
Other / Custom	Admin can create a new category/product/variant with custom fields

3. CUSTOMER 360° CRM

- Customer master: name, mobile, email, DOB, address, KYC and business-relevant fields.
- Family tree / linked members with relationship and individual policy ownership.
- Customer tags: HNI/VIP/priority, lead source, status and custom tags.
- One-click view of all policies, renewals, claims, grievances, documents, payments, activities and communications.
- Customer timeline: every important event chronologically with date/time and notes.
- Global search by name, mobile, policy number, claim number, proposal number or case/reference number.
- Duplicate detection/merge workflow to avoid multiple profiles for the same customer.

4. LEAD & SALES PIPELINE

Standard workflow: Enquiry → Requirement Analysis → Lead Qualification → Quote → Comparison → Proposal → Medical/Underwriting → Payment → Issued → Servicing.

- Lead capture from website, manual entry and future integrations.

- Requirement form by insurance category.
- Lead status, priority, source, expected premium/business value and next action.
- Multiple quotes/products against one lead.
- Follow-up history and conversion/lost reason.
- Convert lead to customer without re-entering data.

5. QUOTATION & POLICY COMPARISON

- Create insurer/product comparison with configurable fields.
- Compare premium, sum insured, benefits, waiting periods, exclusions, deductibles, riders/add-ons and key conditions where data is available.
- Save multiple quote versions.
- Generate branded, mobile-friendly PDF comparison for customer.
- Clearly distinguish advisory comparison from insurer-issued policy wording; avoid presenting estimates as final coverage.

6. POLICY PORTFOLIO MANAGEMENT

- Policy number, category, insurer, product, insured members, premium, sum insured, policy dates, payment mode and status.
- Riders/add-ons, nominee, renewal date, waiting periods, important exclusions and notes.
- Portability/migration history and previous policy continuity information.
- Policy document, schedule, proposal and endorsements linked to policy.
- Policy status: Active / Renewal Due / Expired / Cancelled / Lapsed / Other configurable states.
- Multiple policies per customer and multiple insured members per policy.

7. SMART RENEWAL ENGINE

- Renewal buckets: 120/90/60/30/15/7 days plus due/expired; make intervals configurable.
- Today / This Week / Upcoming / Overdue dashboard.
- Automatic follow-up task creation and configurable reminders.
- Renewal quote/version history, payment status and receipt storage.

- Track renewed, migrated, ported, lapsed and lost policies with reason.
- Never rely only on notifications: dashboard must show pending action clearly.

8. CLAIM COMMAND CENTER

Claim lifecycle: Intimation → Document Collection → Submission → Insurer Query → Customer/Advisor Reply → Decision → Payment/Repudiation/Partial Settlement → Closure.

- Claim number, policy, insured person, hospital/provider, admission/discharge dates, claim type and amount.
- Cashless / reimbursement / other configurable types.
- Document checklist with received/pending status.
- Company query and reply tracker with dates and attachments.
- Status timeline and next action.
- Settlement amount, decision, closure reason and complete correspondence record.

9. GRIEVANCE + INSURANCE OMBUDSMAN CASE MANAGEMENT

- Insurer grievance number, complaint date, issue category, description and documents.
- Company response, escalation dates and follow-up deadlines.
- Ombudsman case/application number, submission date, documents, communications, hearing dates and award/order.
- Case status: Draft / Submitted / Pending / Hearing / Award / Closed.
- Full chronological timeline and secure case document folder.
- Generate professional case/document checklists and submission summaries.

10. DIGITAL DOCUMENT VAULT

- Customer-level and case-level folders.
- Categories: KYC, Policy, Proposal, Medical, Claim, Bills, Discharge Summary, Renewal, Grievance, Ombudsman, Payment and Other.
- Upload, preview, download, rename, tag, version and metadata.
- Document expiry/reminder field where relevant.
- Secure storage, backup and audit trail.
- No sensitive documents exposed through public URLs.

11. FOLLOW-UP / TASK CENTER

- Single Today page: Overdue, Due Today, Upcoming, Completed.
- Every task linked to customer + relevant lead/policy/claim/case.
- Priority, due date, notes, outcome and next follow-up.
- Quick complete/reschedule.
- Optional recurring tasks for servicing routines.

12. COMMUNICATION & WHATSAPP-READY CENTER

- Template library: renewal, documents required, claim update, policy issued, payment reminder, birthday, anniversary, grievance update and custom messages.
- Variables: customer name, policy number, renewal date, claim number, etc.
- Communication history linked to customer/case.
- Official WhatsApp Business/API integration should be used where required; avoid unsafe/unofficial automation.
- Email/SMS integration can be added as configurable channels.

13. OWNER DASHBOARD

Widget	Purpose
Today's Actions	Overdue follow-ups, renewals, claim queries and case deadlines
Renewals	Upcoming, due, expired and renewal conversion
Business	New leads, quotes, issued policies and premium/business value
Claims	Open claims, pending documents, queries and decisions
Cases	Open grievances/Ombudsman matters and next dates
Customers	Total, active and recent customers
Quick Add	Customer, lead, policy, renewal, claim, grievance, document, task

14. WEBSITE – PREMIUM CUSTOMER-FACING

- Home: clear value proposition, trust, services and strong CTA.
- Insurance Solutions: all major categories with configurable product pages.
- Health, Life, Motor, Travel, Property/Home, Personal Accident, Commercial/

Business and Specialty sections.

- Claim Assistance page with clear process and document-request CTA.
- Renewal Assistance page.
- Policy Review / Comparison enquiry form.
- About, Why Us, FAQs, Contact and Knowledge/Blog section.
- Website forms create leads directly in the software.
- WhatsApp/contact CTA, responsive design, SEO-ready, fast loading and accessible UX.
- Admin-managed content so basic website updates do not require code changes.

15. OPTIONAL CUSTOMER PORTAL – ARCHITECTURE READY

- Customer login/OTP.
- View policies, renewal dates, documents and claim/case status.
- Raise service requests and upload documents.
- Download approved documents/PDF summaries.
- Portal permissions must expose only the customer's authorized information.

16. SMART AUTOMATION

- Renewal alerts and task generation.
- Claim query/pending-document alerts.
- Grievance/Ombudsman deadline reminders.
- Follow-up reminders.
- Website lead instant task/notification.
- Configurable notification rules and quiet-hours controls where applicable.
- Automation logs so the owner can see what was generated/sent.

17. AI-READY FEATURES – FUTURE PHASE

- Policy document summarization with clear source/reference to the uploaded document.
- Document classification and suggested folder/category.

- Claim document checklist suggestion based on claim type, with owner review before sending.
- Draft customer communications.
- Search assistant over the owner's authorized business data.
- Lead/customer opportunity suggestions based only on available business data.
- AI must never silently make coverage/legal/claim decisions; show confidence/context and keep human approval for consequential outputs.

18. REPORTS & ANALYTICS

- Customer report, policy portfolio, renewal, lead/sales funnel, quote comparison, issued business, insurer-wise, product-wise, premium/business-value, claim, grievance/Ombudsman and follow-up reports.
- Date filters, category/insurer filters, status filters.
- Export to CSV/Excel/PDF where appropriate.
- Monthly, quarterly and yearly views.
- Dashboard KPIs should be calculated from a single source of truth.

19. SEARCH, FILTER & DATA QUALITY

- Global instant search.
- Advanced filters by customer, insurer, product, renewal date, status, claim/case status and tags.
- Required-field validation.
- Duplicate customer/policy warning.
- Activity/audit history for important changes.
- Soft-delete/archive rather than destructive deletion for critical records, subject to retention policy.

20. SECURITY & PRIVACY – NON-NEGOTIABLE

- HTTPS everywhere and secure authentication/session management.
- Strong password/OTP options and optional 2FA.
- Role-based access architecture even though only Owner/Admin is used initially.
- Audit log for login and important create/edit/delete/export actions.

- Encryption in transit and appropriate encryption/secure storage at rest.
- Secure file access with authorization checks and expiring access where appropriate.
- Automated backups + tested recovery plan.
- Secrets/API keys stored securely, never hard-coded.
- Input validation, rate limiting, CSRF/XSS/SQL-injection protections and secure headers.
- Privacy-conscious logging: never log unnecessary KYC/document contents.
- Document retention and deletion rules should be configurable and aligned with applicable law/company requirements.

21. TECHNICAL ARCHITECTURE

- Modular, API-first backend so web app, future mobile app and integrations share the same business logic.
- Core relationship: Customer → Family Members → Leads/Policies → Renewals → Claims → Grievance/Ombudsman Cases → Documents → Activities/Communications.
- Configurable master data for insurers, categories, products, riders, statuses, document types and task types.
- Background job/queue layer for reminders and scheduled automation.
- Central notification service.
- Central audit service.
- Database migrations, automated backups and monitoring.
- Staging environment before production.
- Documented API endpoints and database schema.

22. CORE SCREENS / NAVIGATION

Main menu	Key screens
Dashboard	Owner dashboard, alerts, quick actions
Customers	Customer list, Customer 360°, family, timeline
Leads	Lead list, pipeline, requirement, quotes, comparison
Policies	Portfolio, policy detail, documents, servicing
Renewals	Calendar/list, due buckets, renewal detail

Claims	Claim list, claim detail, checklist, queries, timeline
Cases	Grievance + Ombudsman case list/detail/timeline
Documents	Global document search and customer/case folders
Tasks	Today, overdue, upcoming, completed
Communications	Templates, history, channel settings
Reports	Business, renewal, claims, cases, analytics
Website	Leads, forms and content management
Settings	Insurers, products, categories, templates, automation, security

23. CUSTOMER DETAIL SCREEN – IDEAL LAYOUT

Header: Customer name + priority/status + quick call/message. Tabs: Overview | Family | Policies | Renewals | Claims | Cases | Documents | Activities | Communications. Right-side/summary cards: next renewal, pending claim action, open grievance/Ombudsman case, overdue task. Quick actions: Add Policy, Add Lead, Add Claim, Add Case, Upload Document, Create Follow-up, Send Template.

24. FUTURE TEAM / EMPLOYEE ARCHITECTURE

- Not required for MVP UI complexity, but database must support users, teams and roles.
- Roles later: Owner, Admin, Sales, Service, Claims, Accounts and custom roles.
- Permission levels: view/create/edit/export/delete/approve by module.
- Branch/team ownership and activity attribution can be added later.

25. FUTURE INTEGRATIONS

- Official WhatsApp Business/API.
- Email/SMS provider.
- Payment gateway where appropriate.
- Insurer/aggregator APIs only where officially available and permitted.
- Cloud storage/document services if selected.
- Accounting integration in future.
- Mobile app using same API/backend.

26. DEVELOPMENT PHASES

Phase	Scope
-------	-------

MVP	Customer 360°, family, all insurance categories/product master, leads, quotes/comparison, policies, renewals, claims, grievance/Ombudsman, documents, tasks, dashboard, website + lead capture, security/backups
Phase 2	PDF builder, official WhatsApp/API, advanced reports, customer portal, richer automation
Phase 3	Mobile app, integrations, team/branch management, AI assistant, advanced analytics

27. DEVELOPER QUALITY CHECKLIST

- Responsive on Android/mobile, tablet and desktop.
- Fast page loads and optimized database queries.
- Every important action has success/error feedback.
- Search and filters remain usable with large data volume.
- Automated tests for critical workflows.
- Staging → UAT → Production deployment process.
- Error monitoring and backup verification.
- Source code, deployment instructions, database schema, API documentation and admin documentation handed over.
- No hidden dependency on developer's personal account.
- Domain, hosting, source repository, database and API ownership must remain with the business owner.

28. MVP ACCEPTANCE TEST – MUST WORK END TO END

- Create a customer → add family member → add lead → create multiple quotes → create comparison → mark policy issued → schedule renewal → create claim → upload documents → record insurer query → reply → close claim → create grievance → create Ombudsman case → attach documents → create follow-ups → view complete customer timeline.
- Website enquiry → automatic lead in software → follow-up task created.
- Renewal date entered → correct dashboard bucket/task generated.
- Search customer by mobile/policy/claim number → full record opens.

- Unauthorized user/file access must be blocked once team roles are introduced.

29. DESIGN DIRECTION

- Premium, trustworthy insurance-advisory look—not a generic corporate ERP.
- Clean typography, strong hierarchy, minimal clutter.
- Mobile-first cards and quick actions.
- Use consistent status badges and timelines.
- Keep common actions within 1–3 clicks.
- Accessibility and readable contrast must be considered.

30. FINAL NON-NEGOTIABLE REQUIREMENT

Do not build this as a collection of disconnected pages. Build one connected business system where every customer, policy, renewal, claim, grievance, Ombudsman case, document, communication and follow-up is linked. The owner should be able to open a customer and understand the complete relationship immediately.

The first version must be SIMPLE for a solo owner, but the underlying architecture must be SCALABLE for a future insurance advisory business with employees, branches, mobile app, integrations and AI.

Before coding, prepare: (1) information architecture, (2) database ER diagram, (3) screen wireframes, (4) user journeys, (5) API plan, (6) security plan and (7) phased development estimate. Then build the MVP and validate the end-to-end acceptance test above.
